

DOME TRAP ASSEMBLY INSTRUCTIONS

Components:

- 1 yellow plastic base
- 1 clear plastic top
- 1 bottle liquid bait (250 ml)

How to assemble:

- 1 Fill the yellow base half way with liquid bait.
- 2 Insert the top in the correct position and twist lock it in place.
- 3 Hang the trap in the desired location.
- 4 Inspect the trap according to your monitoring strategy. Dispose of the bait once every 2 to 3 months or when the trap is full of insects. Clean the trap and refill.

NOTE TO USER:

Adding water to the liquid bait at a ratio of 5 to 1 will prevent the bait from turning to gel and will make it last longer in hot conditions.
